***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: With regards to claim 1, the prior art of record does not disclose or fairly teach an impedance adjusting system comprising a first, second and third logic circuit wherein the first logic circuit control the first switch network to incrementally change the total resistance of the first series connected string, the second logic circuit is responsive to the output of the comparator and adapted to hold a state of the first switch network to maintain a coarse resistance value of the first series connected string at a value corresponding to a value before which the comparator changes state when the first logic circuit incrementally changes the resistance of the first series connected string, while disconnecting the first series connected string from ground, and the third logic circuit adapted to control the second switch network to incrementally change the total resistance of the second series connected string, wherein the second logic circuit is responsive to the output of the comparator and adapted to hold a state of the second switch network to maintain a fine resistance value of the first series connected string at a value corresponding to a value at which the comparator changes state when the third logic circuit incrementally changes the resistance of the first series connected string.

With regards to claim 2, the prior art of record does not disclose or fairly teach a network of resistors between the pair of terminals, having a plurality of switches to include or remove, in accordance with switch setting, one or more resistors from the network of resistors, and a logic block responsive to the n respective outputs of the

output comparators to control the plurality of switches to include resistors in or remove resistors from the network of resistors adaptively so as to maintain predetermined termination impedance between the terminals.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Nagano US Patent 6,628,223 and Jin et al US Patent 6,862,714.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
